Luberchlosis sequencing at the Sanger Centre are available on the World Wide Web.

(UKL, http://www.sanger.ac.uk/Projects/M_tuberchlosis/) CDS have been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers gene prediction was based on a Hidden Markov Model of TB genes implemented in TBparse (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observod/expected third position G + C.

CAUTION: In some cases we may not have predicted the correct
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CAUTION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon date, quy, or Luy which is preceded by an upstream ribusome binding site sequence (optimally 5-13pp before the initiation codon). If this cannot be identified we choose the most upstream
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /organism-"Mycobacterium tuberculosis H37Rv"

                                                                                                                                                                                                                                                                                                                                               (URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers. Gene prediction was based on a Hidde. Markov Model of TB genes implemented in TBparse (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed/expected third position G + C. CAUTION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon (itg, qtg, or ttg) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                967. .1629

```

```
probable precision of serine protease. Has putative signal peptideat N-terminus and hydrophobic stretch at C-terminus. Contains three signatures typical of subtilase family: aspartic acid active site (PS00136), histidine active site (PS00137), serine active site (PS00138). FASTA results: 053863 SERINBFROTHSES (390 aa) opt: 241; E(): 8e-07; (38.0% identity in387 aa overlap), similar to MTCX15F10.29 (45.7% identity in 451 aa overlap)"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAALDTTARPOO'QRTTELSGALAASC TAGGGLMLVRNALGTNVTRYSDATAGVVAAA

                                                                                                                                                                                                                                                                                                                      initiation codon. Where possible we choose an initiation codon data, ada, or tudy which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream codon).
                  Details of M. tuberculosis sequencing at the Sanger Centre are available on the World Wide Web.

Reverse transcription of thissue mRNA and cDNA amplification were performed under low stringency conditions.

      Site_2: Smal; A mini-library was made by cloning products derived from ORESTES PCR (U.S. Letters Patent application No. 196,716 - Ludwig Institute for Cancer Research) profiles into the pUC 18 vector. Reverse transcription of tissue mRNA and cDNA amplification were performed under low stringency conditions."

                A DNA molecule (AAT33658) codes for a protein (AAW02303) that confers on Mycobacterium tuberculosis an ability to survive within macrophages. It is a fragment of a larger molecule (AAT33656) obtd. by ligating M. tuberculosis genomic DNA fragments into pBluescript II vector and screening recombinant E. colistrains for Hela cellinvasive clones. It can be incorporated into a vector and used for prodn. Of recombinant macrophage survival protein, which is useful in vaccines or for facilitating uptake of other materials, e.g. therapeutic genes, into mammalian cells. A second DNA molecule (tuberculosis the ability to enter mammalian cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Mycobacterium tuberculosis DNA - confers ability to enhance uptake of therapeutic agents e.g. antibiotics, also useful in vaccines
                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence encodes a Mycobacterium tuberculosis cellular uptake protein fragment, which confers on M. tuberculosis an ability to survive within macrophages.

The protein can be used in a vaccine to prevent M. tuberculosis infection, and provide for the uptake in cells of, e.g. antihiotics, DNA fragments or anti-neoplastic agents. Antibodies raised against it can be used to treat mammals already exposed to
                                                                                                                                                                                                                   .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The isolated DNA molecule of the invention confers on M. tuberculosis an ability to enter cells and to survive within macrophages. It encodes a polypeptide having a mol. wt. of about 50-55 kDa, pref. 52 kDa. The AA sequence represents a highly hydrophilic protein with a hydrophobic region at its carboxy terminus. It could be a secreted protein, a cytophasmic protein, or a surface protein with its carboxy terminus attached to the outer membrane of the organism. The deduced AA sequence is in AAR71931.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DNA encoding for cellular uptake of Mycobacterium tuberculosis used to develop prods for vaccines, passive immunisation and diagnosis and cellular uptake of other materials

Mycobacterium tuberculosis DNA - confers ability to enhance uptake of therapeutic ayents e.g. antibiotics, also useful in vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence encodes a Mycobacterium tuberculosis cellular uptake protein frayment, which confers on M. tuberculosis an abi'ity to enter mammalian cells and to survive within macrophages. The protein can be used in a vaccine to prevent M. tuberculosis infection, and provide for the uptake in cells of, e.g. antibiotics, DNA fragments or anti-neoplastic agents. Antibodies raised against it can be used to treat mammals already exposed to M. tuberculosis, to induce a passive immunity and prevent disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                BCG delta 3; virulence; avirulence; attenuation; gene deletion; mycobacteria; vaccine; infection; marker; ss.

The encoded protein sequence is given in AAW03301. The DNA was obid. By ligating W. tuberculosis genomic DNA fragments into paluescript II vector and screening recombinant E. coli strains for HeLa cellinvasive clones. The DNA includes 2 separate coding regions (see also AR733657-58) coding for the cell entry (AAW03302) proteins. It can be used to produce the cellular uptake proteins used as vaccines or to facilitate uptake of other materials, e.g. therapeutic genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DNA giving M. tuberculosis ability to enter mammalian cells and/or survive within macrophage(s), useful in vaccines to protect mammals against Mycobacterium tuberculosis infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ;
